

Through 2031, we hold a valid U.S. patent for the use of a handheld tire gauge to control axle overload on vehicles with air suspension systems.

We have expanded the application of these gauges and learned how to determine everything about the weight of the truck, trailer, and cargo using Mouse Scale Pro.

It is a very affordable, reliable, and highly accurate device.

If you want to use our patented method, simply purchase a license sticker that includes clear load-control instructions.

Any driver who reads it will understand their rights regarding load control and the standard compensation agreement for saving carrier resources.

The license price for the entire patent term is only \$100, and we guarantee that it will not change until July 2026
